

Career Compass SG — Team Presentation Plan

Module 1 Assignment · Group 7 · 10 minutes · the assignment's official 4-section flow

This document is the team's coordination sheet. Each section has its own script in `reports/speakers/` — that is what you rehearse from. This page is what you agree on together: who speaks when, the handovers, and who takes which question.

Running order — matches the assignment brief exactly

#	Section (official name)	Official guide	Ours	Speaker	Script
1	Business case & objective	2–3 mins	2:15		<code>speakers/01_business_case_and_objective.pdf</code>
2	Process & data handling	3–4 mins	3:30		<code>speakers/02_process_and_data_handling.pdf</code>
3	Dashboard / app walkthrough	3–4 mins	3:00		<code>speakers/03_dashboard_walkthrough.pdf</code>
4	Challenges & learnings	1–2 mins	1:15		<code>speakers/04_challenges_and_learnings.pdf</code>

Total = 10:00. Every measured script runs 5–10 seconds under its slot, which is your handover allowance. Write names in the blank column and keep a printed copy on the desk.

Five members, four sections: the natural split is one section each plus a dedicated demo driver — the fifth member sits at the laptop and drives the mouse during Section 3 while the speaker narrates. That keeps the walkthrough smooth and gives everyone a live role. (Alternatively the fifth member leads Q&A.)

The arc — what the room should feel

Section	The one thing it must land
1	<i>A specific user, a specific decision: which career track should I target next?</i>
2	<i>We found a hidden trap in the data that would have flipped our conclusions.</i>
3	<i>Three screens answer the question — and the ranking changes live when priorities change.</i>
4	<i>The best-paying track and the easiest-to-enter track are almost never the same track.</i>

Read down that column: one argument, four steps.

Handovers — rehearse these out loud

From → To	The line
1 → 2	"So that's the question we set out to answer. Now — how we turned one million messy rows into data we could trust."
2 → 3	"That's the data. Now — the dashboard we built on top of it."
3 → 4	"That's the product. My teammate will close with what this project taught us."
4 → end	"...and lets you decide which one you need this year. Thank you."

Live demo (Section 3 only)

Three screens, one interaction. Nobody else opens the dashboard.

1. **Market Overview** — the market at a glance, medians, honesty marks
2. **Demand vs Competition** — the opportunity map, 0.7 → 11.3 applicants per seat
3. **Career Recommender** — pre-set persona, then drag the sliders: top five changes live

Setup before you walk up:

- Dashboard already running at <http://localhost:8501> — never start it in front of the room
 - Browser zoom ~80%; Recommender inputs pre-set (3 years, \$4,000)
 - **Screenshot fallback slides for all three screens.** If the demo fails, switch and narrate. **Nobody debugs in front of the room.**
-

Time discipline

- Section 2 is the longest and richest. **Its cut rule: drop the "two traps" part, protect the June 2023 story.**
 - Section 3's cut rule: shorten Screen 1 to one sentence; **the slider moment must happen.**
 - Whoever is not speaking watches the clock and gives a visible 30-second signal.
-

Question ownership

When a question comes, **the owner answers** — do not all start talking.

Topic	Owner
Business case, target user, "why not LinkedIn", success criteria	1
Cleaning rules, the June 2023 break, duplicates, Parquet/pipeline	2
Any dashboard page, filters, the score, the weights, the demo	3
Lessons, limitations, next steps, "what would you do differently"	4
Anything else	1 (and it's fine to say "we didn't test that")

The three most likely questions

1. **"Why is competition only measured up to June 2023?"** → Owner 2. The counters freeze after that date; 79% of later postings show zero applications. ~200,000 postings remain.
2. **"Isn't IT the obvious answer anyway?"** → Owner 3. IT is biggest and best-paid — with ~5 applicants per seat, and postings **down 11.7%** in six months. The obvious answer is the crowded, cooling one.
3. **"Aren't your score weights arbitrary?"** → Owner 3. Deliberately — that's why they're sliders the user controls, not constants we chose for them.

Rehearsal checklist

- [] One full run-through against a clock — **under 10:00 including handovers**
- [] Every speaker has read *their own* script in `reports/speakers/`
- [] Handover lines rehearsed — the joins are where teams lose time
- [] Demo path (3 screens + slider drag) run on the actual presentation machine
- [] Screenshot fallbacks exist for all three demo screens
- [] Question ownership agreed and printed
- [] Everyone can answer the June 2023 question, not just Owner 2

Supporting documents

Document	What it is
<code>reports/speakers/0*.pdf</code>	the four section scripts — rehearse from these
<code>reports/PROJECT_REPORT.pdf</code>	the full written report (assignment sections 1–4)
<code>notebooks/01_eda.ipynb</code>	the EDA behind every claim made on stage
<code>SETUP.md</code>	how to run the dashboard and rebuild the data
