

Section 1 of 4 — Business Case & Objective

Career Compass SG · Module 1 Assignment · Group 7

Your time: 2:15 (official range 2–3 min) · You open the presentation

Your job in one sentence

Give the room a specific user, a specific decision, and the reason our dashboard helps make it. That is exactly what the marking rubric asks for under "Business case clarity" (20%). You set the frame — everyone after you fills it in.

Where you sit in the flow

	Section	Time	Official guide
→ YOU	1 · Business case & objective	2:15	2–3 mins
	2 · Process & data handling	3:30	3–4 mins
	3 · Dashboard / app walkthrough	3:00	3–4 mins
	4 · Challenges & learnings	1:15	1–2 mins

Your handover to Section 2: *"So that's the question we set out to answer. Now — how we turned one million messy rows into data we could trust."*

Script

Part 1 — The scenario and the user (0:00 – 0:45)

(Slide: title + the user)

Have you ever opened a job website and thought: "So many jobs — but which one is actually right for me?"

That's our starting point. A job website shows you **what jobs exist**. It never tells you **which job is worth going after** — and that question decides your next few years.

Our user is a job seeker or career switcher in Singapore — someone standing at a fork, deciding which career track to aim at next. Our secondary user is the career coach advising them.

Part 2 — The objective (0:45 – 1:30)

(Slide: the four dimensions)

The decision we help with is: which career track should I target next?

That decision depends on four things, and no job website shows them side by side:

- **Demand** — are there enough openings to realistically land one?
- **Pay** — how much does it pay, at my level?
- **Competition** — how many people want the same seat?
- **Accessibility** — can I get in with the experience I have today?

So we built **Career Compass SG**: a dashboard that scores **215 career tracks** — 43 job categories across 5 seniority levels — on all four, using **1,044,597 real Singapore job postings** from October 2022 to May 2024.

Part 3 — Success criteria (1:30 – 2:00)

How do we know if it works? We gave ourselves a simple test: **the three-minute test**.

A user opens the dashboard, and within three minutes they can say: *"these are the three tracks I should target, this is what they pay, and this is how crowded they are."* Everything in the product exists to pass that test.

Part 4 — Handover (2:00 – 2:15)

One honest note: this was **not our first idea**. We started with a simple "top-paying jobs" ranking. The data itself killed that idea — pay, demand and competition turned out to be almost unrelated, so ranking on any one of them is misleading.

So that's the question we set out to answer. Now — how we turned one million messy rows into data we could trust.

Numbers you must know cold

Figure	Value
Postings analysed	1,044,597
Date range	Oct 2022 – May 2024
Career tracks scored	215 (43 categories × 5 seniority levels)
The four dimensions	demand · pay · competition · accessibility
Success test	3 minutes to a named shortlist

Questions you own

"Why not just use LinkedIn or MyCareersFuture?"

Those sites show job posts. They never show how many applicants compete for each seat, and they never compare career tracks against each other. That comparison is our whole product.

"Who exactly would pay for / use this?"

Job seekers and switchers directly; career coaches as a client tool. Today it runs locally; hosting it as a public site is the natural next step, and the analytics already handle the full million rows.

"Can a dashboard really answer 'which career should I pick'?"

Not alone — and we say so inside the app. Our score ranks *market conditions*; whether you would enjoy the work is your half of the decision.

Rehearsal checklist

- ☐ Timed at **2:15 or under**
- ☐ You can name the four dimensions without the slide
- ☐ The three-minute test stated as one clean sentence
- ☐ Handover line practised out loud
