

Section 3 of 4 — Dashboard / App Walkthrough

Career Compass SG · Module 1 Assignment · Group 7

Your time: 3:00 (official range 3–4 min) · You run the live demo

Your job in one sentence

Show the main views, the interactions, and how each one answers the business question. The rubric's words exactly. Three screens, three interactions, and the ranking changing live in front of the room — that is your whole section.

Where you sit in the flow

	Section	Time	Official guide
	1 · Business case & objective	2:15	2–3 mins
	2 · Process & data handling	3:30	3–4 mins
→ YOU	3 · Dashboard / app walkthrough	3:00	3–4 mins
	4 · Challenges & learnings	1:15	1–2 mins

Section 2 hands you: *"...the dashboard we built on top of it."* **Your handover to Section 4:** *"That's the product. My teammate will close with what this project taught us."*

Before you start

- Dashboard already running at `http://localhost:8501` — never start it live
 - Browser zoom ~80% so charts fit the projector
 - Recommender inputs pre-set: **3 years' experience, \$4,000 minimum salary**
 - Screenshot backup slides for all three screens
 - **Discipline: three screens, not seven. Do not free-roam.**
-

Script

Screen 1 — Market Overview (0:00 – 0:40)

The dashboard has seven pages — six pages of evidence and one product page. Let me show you the three that matter most.

(Screen 1: Market Overview)

The front page answers "how big is this market?" One million postings, **median salary \$3,850 a month**, and **36% of jobs open to people with one year of experience or less**.

Two design choices you'll see everywhere. First, **every chart states its finding in a sentence above it** — we tell you the point, then show the proof. Second, honesty marks: this grey band flags months where data collection was incomplete, so nobody misreads it as a market crash.

Screen 2 — Demand vs Competition (0:40 – 1:40)

(Screen 2: the opportunity map)

This page answers the first half of our business question: **where are the good odds?**

Every bubble is a job category. **Up means more jobs. Right means more applicants per seat.** Size is open seats; colour is pay.

Top-left is the sweet spot — many jobs, almost no queue. F&B sits there with just **1.0 applicants per seat**. Top-right is the trap. And the spread is enormous: from **0.7** applicants per seat in Personal Care to **11.3** in Social Services — a **sixteen-fold difference** that no job website will ever show you.

Notice the orange note: competition figures come from the reliable data window my teammate explained. We'd rather show a caveat than a confident wrong number.

Screen 3 — Career Recommender (1:40 – 2:45)

(Screen 3: the Recommender — the product)

And this page answers the question itself: **which track should I target?**

I'm a career switcher: **three years of experience, need at least \$4,000 a month**. The tool scores all 215 tracks on four things — openings, pay, competition, and how easy each is to enter for *my* experience — and ranks them.

Top answer: **IT at mid level** — 69,000 postings, \$6,500 median, and 57% of its jobs accept my three years. These bars show **exactly why** it ranked first. Nothing is a black box.

Now watch. Suppose I don't want the best pay in five years — **I need a job in six weeks**. *(drag "Easy for me to enter" up, "High pay" down)*

The entire top five changes — HR, Sales, Education at entry level. Not one survivor from the old list. Same data, different person, different advice — **the score is a set of sliders, not a verdict**.

Handover (2:45 – 3:00)

Six evidence pages, one product page, every number auditable. That's how the dashboard answers the business question.

That's the product. My teammate will close with what this project taught us.

Numbers you must know cold

Figure	Value
Front page	1M postings · \$3,850 median · 36% entry-friendly
Competition spread	0.7 → 11.3 applicants per seat (16×) · F&B 1.0
Demo persona	3 years' experience · \$4,000 minimum
Top result (default)	IT – Mid: ~69k postings · \$6,500 · 57% open to 3 yrs
After slider change	HR / Sales / Education at Entry — zero overlap
Tracks scored	215 · four components · weights 30/30/25/15

Backup if the demo fails — read this table out:

Rank	Balanced (default)	"Easiest to enter"
1	Information Technology – Mid	Human Resources – Entry
2	Information Technology – Senior	Sales / Retail – Junior
3	Sales / Retail – Junior	Sales / Retail – Entry

Questions you own

"Aren't the score weights arbitrary?"

Deliberately — that's why they're sliders the user controls, not constants we buried in code. There's no objectively right trade-off between money and speed of hiring. What we guarantee is that the four inputs are measured honestly and every contribution is visible.

"What filters does it have?"

A global sidebar on every page: time period, employment type, seniority, salary range, open-postings-only. Filters recompute everything live from 1.77 million rows in about 0.06 seconds — not from frozen summaries.

"Why does the map use a log axis?"

Category sizes span a few hundred to 140,000 postings. On a normal axis the small half of the market would be squashed flat. The axis is labelled as logarithmic.

"Does the recommender know anything about me?"

Only your years of experience and salary floor. It ranks market conditions — it doesn't know what you'd enjoy, and the app says so in plain words.

If the live demo fails: switch to the screenshots and the backup table. **Never debug in front of the room.**

Rehearsal checklist

- ☐ Timed at **3:00 or under**, including the slider drag
- ☐ The three-screen path rehearsed on the presentation machine, three times
- ☐ Sliders dragged on that machine — you know exactly where they are
- ☐ "0.7 to 11.3, sixteen-fold" said from memory
- ☐ Backup screenshots on your own slides
