

Career Compass SG — Team Presentation Plan

Module 1 Assignment · Group 7 · 10 minutes · 5 speakers

This document is the team's coordination sheet. Each speaker has their own script in `reports/speakers/` — that is what you rehearse from. This page is what you agree on together: who speaks when, what the handovers are, and who takes which question.

Timing plan

#	Topic	Speaker	Time	Runs from	Script
1	Dashboard overview		2:15	0:00	<code>speakers/01_dashboard_overview.pdf</code>
2	Project technology stack		1:30	2:15	<code>speakers/02_technology_stack.pdf</code>
3	Data cleaning		2:15	3:45	<code>speakers/03_data_cleaning.pdf</code>
4	Data analysis 1 — market & pay		2:00	6:00	<code>speakers/04_data_analysis_1_market_and_pay.pdf</code>
5	Data analysis 2 — competition, skills & scoring		2:00	8:00	<code>speakers/05_data_analysis_2_competition_and_scoring.pdf</code>

Write your names in the blank column and keep a printed copy on the desk.

The arc — what the room should feel

Speaker	The one thing they must land
1	<i>A job board can't tell you which job is worth taking. Here's what we built.</i>
2	<i>The architecture was a decision — a million rows filter in 0.06 seconds.</i>
3	<i>We found a trap in this data that would have inverted our conclusions.</i>
4	<i>Where the jobs are is not where the money is.</i>
5	<i>The best-paying track and the easiest-to-enter track are almost never the same one.</i>

Read down that column. It is a single argument, and each speaker is one step in it. If your section doesn't advance it, cut the sentence.

Handovers — rehearse these out loud

From → To	The line
1 → 2	"So that's what we built. Now — how do you make a million rows feel instant?"
2 → 3	"That's the machinery. But none of it matters if the numbers going in are wrong — and this dataset had a trap in it."
3 → 4	"So that's the data we trust. Here's what it actually says."
4 → 5	"Volume and pay are two of the four dimensions. The other two are where it gets interesting."
5 → close	"Now you can see both — and decide for yourself which one you need this year."

Live demo split

Two speakers touch the dashboard. **Nobody else opens it.**

Speaker	Screens	Discipline
1	Market Overview → Career Explorer	Two clicks. Sets up what the product is.
5	Career Recommender + weight sliders	One interaction. The payoff — the ranking changes live.

Setup, done before you walk up:

- Dashboard already running at `http://localhost:8501` — never start it in front of the room
- Browser zoom ~80% so charts fit the projector
- Speaker 5's inputs pre-set: 3 years' experience, \$4,000 minimum
- **Screenshot fallback slides for every demo screen.** If it fails, switch and narrate. **Nobody debugs in front of the room.**

Time discipline

Speaker 3 has the richest material and is the most likely to overrun. Agree this in advance:

- If the clock passes **5:00** and Speaker 3 hasn't reached the engagement-break story, they cut straight to it. That story is the one that must land.
- If the whole presentation passes **8:30** before Speaker 5 starts, Speaker 5 drops Part B (hard-to-fill and skill premium) and goes straight to the live demo and the close.

Whoever is not speaking watches the clock and gives a visible one-minute signal.

Question ownership

Decide this before you present. When a question comes, **the owner answers** — do not all start talking.

Topic	Owner
Business case, target user, "why not LinkedIn"	1
Architecture, Parquet, Streamlit vs BI tools, scaling	2
Any cleaning rule, the June 2023 break, duplicates, missing values	3
Salaries, medians vs means, seniority ladder, experience curve	4
Competition metric, skill keywords, the score and its weights	5

If a question lands outside everyone's section: Speaker 1 takes it, since they framed the project. It is completely fine to say *"we didn't test that — here's what we'd need to do to answer it."*

The three most likely questions

1. **"Why is competition only measured up to Jun 2023?"** → Speaker 3. The counters stop accumulating; 79% of later postings show zero applications. 203,702 postings is still ample.
2. **"Isn't IT the obvious answer? Why build a tool?"** → Speaker 5. IT is the biggest *and* best-paying — and its postings **fell 11.7%** in six months. The obvious answer is the cooling one.
3. **"Aren't your score weights arbitrary?"** → Speaker 5. Yes, deliberately — which is why they're sliders the user controls rather than constants we chose for them.

Rehearsal checklist

- [] **One full run-through against a clock**, all five speakers, under 10:00 including handovers
- [] Every speaker has read *their own* script in `reports/speakers/`
- [] Handover lines rehearsed — the join is where teams lose time
- [] Speakers 1 and 5 have run their demo paths **on the actual presentation machine**
- [] Screenshot fallbacks exist for every demo screen
- [] Question ownership table agreed and printed
- [] Everyone can answer the June 2023 question, not just Speaker 3 — it is the most likely one
- [] Notebook open in a second tab in case someone asks to see the cleaning code

Supporting documents

Document	What it is
<code>reports/speakers/0*.pdf</code>	the five individual speaker scripts — rehearse from these
<code>reports/PROJECT_REPORT.pdf</code>	the full written report (assignment sections 1–4)
<code>notebooks/01_eda.ipynb</code>	the EDA behind every claim made on stage
<code>SETUP.md</code>	how to run the dashboard and rebuild the data
