

Speaker 1 of 5 — Dashboard Overview

Career Compass SG · Module 1 Assignment · Group 7

Your slot: 0:00 – 2:15 (2 minutes 15 seconds) · You open the presentation

Your job in one sentence

Make the room care about the problem, then show them the thing we built. You are the only speaker who gets to set the frame — everyone after you is explaining *how*. You explain *what* and *why*.

Where you sit in the flow

	Speaker	Topic
→ YOU	1	Dashboard Overview
	2	Technology stack
	3	Data cleaning
	4	Data analysis 1 — market & pay
	5	Data analysis 2 — competition, skills & scoring

You hand over to Speaker 2 with: "...so that's what we built. Now — how do you make a million rows feel instant?"

Before you start

- Dashboard already running at <http://localhost:8501> — **do not start it in front of the room**
- Browser on the **Market Overview** page, sidebar filters at defaults (May 2023 – May 2024)
- Browser zoom ~80% so the full chart fits on the projector
- Screenshot fallback slides ready for both demo screens

Script

Part A — The problem (0:00 – 0:45)

(Slide: title + the four dimensions)

Everyone here has looked at a job board and asked a question it cannot answer.

A job board tells you **what jobs exist**. It never tells you **which one is worth going after** — and that question decides your next five years.

Our user is a Singapore job seeker or career switcher, deciding which track to aim at. That decision turns on four things no job board shows side by side:

- **Demand** — are there enough openings?
- **Pay** — what does it pay, at my level?
- **Competition** — how many people am I up against per seat?
- **Accessibility** — can I get in with what I have *today*?

Part B — What we built (0:45 – 1:15)

(Slide: the seven pages)

So we built **Career Compass SG**. It scores **215 career tracks** — 43 categories across five seniority levels — on those four dimensions, from **1,044,597 Singapore job postings**.

Seven pages: six are **evidence**, and the seventh, the Recommender, is the **product**. We didn't want a tool that tells you what to do without letting you check its reasoning.

Our test is three minutes — open it and you can name the three tracks you should target.

Part C — Live demo, two screens only (1:15 – 2:00)

Discipline: two clicks, not twelve. Do not free-roam.

Click 1 — Market Overview (~25 s)

One million postings. **\$3,850 median monthly salary. 36% open to someone with a year of experience or less.**

Two habits you'll see everywhere: **we quote medians, not means** — the distribution is skewed, and both lines are on this histogram. And this **grey band** marks months where our collection was still filling up.

Click 2 — Career Explorer (~20 s)

Every number is auditable. Pick IT: the pay ladder by seniority, the real job titles, and who posts them — labelled **"Poster"**, not "Employer", because the top five are recruitment agencies.

Part D — The honest admission (2:00 – 2:15)

One admission: **this wasn't our first idea**. We started with a top-paying-jobs dashboard. The data killed it — pay, volume and competition are almost independent. My colleagues will show you the numbers.

So that's what we built. Now — how do you make a million rows feel instant?

Numbers you must know cold

Figure	Value
Postings analysed	1,044,597 (from 1,048,585 raw)
Date range	Oct 2022 – May 2024
Career tracks scored	215 (43 categories × 5 seniority bands)
Median monthly salary	\$3,850
Entry-friendly postings (≤ 1 yr experience)	36%
Total vacancies (seats)	2,725,717
Distinct posting organisations	53,150

Questions you own

"Why not just use LinkedIn or MyCareersFuture directly?"

They show you *postings*. They never show you the applicant-to-seat ratio, and they never let you compare a track you're in against one you're not. That comparison is the entire product.

"Who exactly is this for — is it a real product?"

Primarily job seekers and career switchers; secondarily the coaches advising them. It is a working local dashboard, not a deployed service. The analytics scale already — the missing pieces are user accounts, a scheduled refresh and hosting.

"Isn't 'which career should I pick' too big a question for a dashboard?"

It is, and we say so in the app. The score ranks *market conditions* — it knows nothing about whether you'd enjoy the work. Market conditions are one input to a career decision, not the decision.

If the live demo fails: switch to the screenshot slides and narrate the same two screens. **Do not debug in front of the room.** Say "I'll show you the live version afterwards" and move on.

Rehearsal checklist

- [] Timed at **2:15 or under**, including the two clicks
- [] The two-click path rehearsed on the actual machine you'll present from
- [] You can state the four dimensions without looking at the slide
- [] Handover line to Speaker 2 practised out loud
- [] Fallback screenshots on your own slides, not someone else's laptop
