

Career Compass SG — Team Presentation Plan

Module 1 Assignment · Group 7 · 5 speakers · up to 3 minutes each

This document is the team's coordination sheet. Each speaker has their own script in `reports/speakers/` — that is what you rehearse from. This page is what you agree on together: who speaks when, the handovers, and who takes which question.

Running order

#	Topic	Speaker	Time cap	Script	Measured length
1	Dashboard overview		3:00	<code>speakers/01_dashboard_overview.pdf</code>	~2:50
2	Project technology stack		3:00	<code>speakers/02_technology_stack.pdf</code>	~2:40
3	Data cleaning		3:00	<code>speakers/03_data_cleaning.pdf</code>	~2:50
4	Data analysis 1 — Demand vs Competition		3:00	<code>speakers/04_data_analysis_1_demand_vs_competition.pdf</code>	~2:55
5	Data analysis 2 — Career Recommender		3:00	<code>speakers/05_data_analysis_2_career_recommender.pdf</code>	~2:50

Total speaking time ≈ **14 minutes** plus handovers. **Write your names in the blank column and keep a printed copy on the desk.**

The arc — what the room should feel

Speaker	The one thing they must land
1	<i>A job website can't tell you which job is worth taking. We built the thing that can.</i>
2	<i>The architecture was a choice — a million rows filter in 0.06 seconds.</i>
3	<i>We found a hidden trap in the data that would have flipped our conclusions.</i>
4	<i>"Lots of jobs" and "easy to get a job" are completely different things — we measured both.</i>
5	<i>Same data, different person, different advice — and every step of it visible.</i>

Read down that column: it is one argument, and each speaker is one step. If a sentence in your section doesn't advance it, cut the sentence.

Handovers — rehearse these out loud

From → To	The line
1 → 2	"That's what the product looks like. Now — the technology that makes it run."
2 → 3	"But fast technology means nothing if the data going in is wrong — and this dataset had a trap hidden inside it."
3 → 4	"So that's the data we can trust. Now — what it tells us about demand and competition."
4 → 5	"A map shows everyone the same picture. How do you turn it into advice for one person? That's the Career Recommender."
5 → close	"Career Compass shows you both — and lets you decide which one you need this year."

Live demo split

Two speakers touch the dashboard. **Nobody else opens it.**

Speaker	Screens	Discipline
1	Market Overview → Career Explorer	Two clicks. Shows what the product is.
5	Career Recommender + weight sliders	One interaction. The payoff — the ranking changes live.

Setup before you walk up:

- Dashboard already running at <http://localhost:8501> — never start it in front of the room
- Browser zoom ~80% so charts fit the projector
- Speaker 5's inputs pre-set: 3 years' experience, \$4,000 minimum
- **Screenshot fallback slides for every demo screen.** If it fails, switch and narrate. **Nobody debugs in front of the room.**

Time discipline

- Every script is measured at **~2:40–2:55** at a normal presenting pace — if you rehearse it once against a clock, you will fit.
- **Speaker 3's cut rule:** if running late, drop Part 2 (the two traps) and protect Part 3 (the June 2023 story).
- **Speaker 4's cut rule:** if running late, drop Part 3 (hard-to-fill) and keep the map.
- Whoever is not speaking watches the clock and gives a visible 30-second signal.

Question ownership

When a question comes, **the owner answers** — do not all start talking.

Topic	Owner
Business case, target user, "why not LinkedIn"	1
Architecture, Parquet, Streamlit vs BI tools, scaling	2
Any cleaning rule, the June 2023 break, duplicates	3
The opportunity map, applicants per seat, hard-to-fill	4
The score, the weights, the demo, "isn't it arbitrary"	5

If a question lands outside everyone's section: Speaker 1 takes it. It is completely fine to say "*we didn't test that — here's what we'd need to do to answer it.*"

The three most likely questions

1. **"Why is competition only measured up to June 2023?"** → Speaker 3. The counters freeze after that date; 79% of later postings show zero applications. ~200,000 postings remain, which is plenty.
2. **"Isn't IT the obvious answer anyway?"** → Speaker 4 or 5. IT is biggest and best-paid — and its postings **fell 11.7%** in six months, and it has ~5 applicants per seat. The obvious answer is the cooling, contested one.
3. **"Aren't your score weights arbitrary?"** → Speaker 5. Deliberately — that's why they're sliders the user controls, not constants we chose for them.

Rehearsal checklist

- ☐ One full run-through against a clock, all five speakers, each **under 3:00**
- ☐ Every speaker has read *their own* script in `reports/speakers/`
- ☐ Handover lines rehearsed — the joins are where teams lose time
- ☐ Speakers 1 and 5 have run their demo paths on the actual presentation machine
- ☐ Screenshot fallbacks exist for every demo screen
- ☐ Question ownership agreed and printed
- ☐ Everyone can answer the June 2023 question, not just Speaker 3

Supporting documents

Document	What it is
<code>reports/speakers/0*.pdf</code>	the five individual speaker scripts — rehearse from these
<code>reports/PROJECT_REPORT.pdf</code>	the full written report (assignment sections 1–4)
<code>notebooks/01_eda.ipynb</code>	the EDA behind every claim made on stage
<code>SETUP.md</code>	how to run the dashboard and rebuild the data
