

Speaker 1 of 5 — Dashboard Overview

Career Compass SG · Module 1 Assignment · Group 7

Your time: up to 3 minutes · You open the presentation

Your job in one sentence

Make the room care about the problem, then give them a tour of what we built. You set the stage. Everyone after you explains one part in detail — you explain the whole picture.

Where you sit in the flow

	Speaker	Topic
→ YOU	1	Dashboard overview
	2	Project technology stack
	3	Data cleaning
	4	Data analysis 1 — Demand vs Competition
	5	Data analysis 2 — Career Recommender

Your handover line to Speaker 2: *"That's what the product looks like. Now my teammate will show you the technology that makes it run."*

Before you start

- Dashboard already running at `http://localhost:8501` — never start it in front of the room
 - Browser on the **Market Overview** page, filters at their defaults
 - Browser zoom around 80% so charts fit the projector
 - Screenshot backup slides ready, in case the live demo fails
-

Script

Part 1 — The problem (0:00 – 0:45)

Have you ever opened a job website and thought: "So many jobs — but which one is actually right for me?"

That is the problem. A job website shows you **what jobs exist**. It never tells you **which job is worth going after** — and that question decides your next few years.

Our user is a **job seeker or career switcher in Singapore**. Before they pick a career track, they need four answers:

- **Demand** — are there enough openings?
- **Pay** — how much does it pay?
- **Competition** — how many people want the same seat?
- **Accessibility** — can I get in with my current experience?

No website shows all four together. So we built one.

Part 2 — What we built (0:45 – 1:30)

(Slide: the seven pages)

This is **Career Compass SG**, built from **1,044,597 real Singapore job postings**, October 2022 to May 2024.

We split the market into **215 career tracks** — a job category plus a seniority level, like "IT at mid level". Every track gets a score on those four things.

The dashboard has **seven pages**. Think of them as six pages of **evidence** and one page that is the **product** — the Career Recommender, which my teammate will demo at the end. We designed it this way on purpose: the tool gives you advice, and every other page lets you check where that advice came from.

Part 3 — Quick live tour (1:30 – 2:30)

Let me show you two screens. *(Click 1 — Market Overview)*

The front page: one million postings, **median salary \$3,850 a month**, and **36% of jobs open to people with one year of experience or less**.

One detail we are proud of: every chart has its **main finding written in a sentence above it**. We tell you the point first, then show the proof.

(Click 2 — Career Explorer)

And this page lets you dig into any category. Pick IT: you see what it pays at every level, the actual job titles being advertised, and who posts them. Notice we say **"Poster"**, not "Employer" — because the biggest posters are recruitment agencies, and we would rather be honest about that than look impressive.

Part 4 — Handover (2:30 – 2:50)

One honest admission before I pass on: this was **not our first idea**. We started with a simple "top-paying jobs" ranking. The data itself killed that idea — you will hear why from my teammates.

That's what the product looks like. Now — the technology that makes it run.

Numbers you must know cold

Figure	Value
Postings analysed	1,044,597
Date range	Oct 2022 – May 2024
Career tracks scored	215 (43 categories × 5 seniority levels)
Median monthly salary	\$3,850
Entry-friendly postings (≤ 1 yr experience)	36%
Pages in the dashboard	7

Questions you own

"Why not just use LinkedIn or MyCareersFuture?"

Those sites show you job posts. They never show how many applicants compete for each seat, and they never compare career tracks against each other. That comparison is our whole product.

"Who is this really for?"

Job seekers and career switchers first; career coaches second. It runs locally today — the analytics are ready, and hosting it as a public website is the natural next step.

"Can a dashboard really answer 'which career should I pick'?"

Not alone — and we say so inside the app. Our score ranks *market conditions*. Whether you would enjoy the work is your part of the decision.

If the live demo fails: switch to the screenshot slides and narrate the same two screens. **Never debug in front of the room.**

Rehearsal checklist

- [] Timed at **3:00 or under**, including both clicks

- ☐ Demo path rehearsed on the actual presentation machine
- ☐ You can say the four dimensions without looking at the slide
- ☐ Handover line practised out loud
- ☐ Backup screenshots on your own slides
